

We went to the library and looked at some maps of the world and Alabama (mostly Alabama) that they had on display. It was really wierd what people thought the world looked like. For a while Alabama wasn't a state then in 1818 it was!

We also went to the Southern Museum of Flight with Pop! Some planes you could get in, one of them you could move the Rudder, the Elevator, and the tiny wings.

after a few minutes the teacher, Mr. Charlie, taught us how to move two of the plane parts, the rudder and the tiny wings (he told us how to move the elevator but we already knew that.) He taught us how to build paper air planes and he gave us tiny woden air planes. We throught them and tried to get them in the hoop. He also gave us some more paper with instructions to take home.

This is what people thought the world looked like.

This is a geological map of Alabama

[Pink box]	Tertiary
[Green box]	Upper
[Light Green box]	Lower
[Grey box]	Coal Measure
[Yellow box]	Millstone grit
[Cyan box]	Carb Limestone
[Light Grey box]	Silurian Sys
[Reddish box]	Metamorphic

This shows the different kind of work people did in each county

This shows the blocks of Birmingham

America made a quilt for Japan to tell them about us

Japan made this for America to tell us about them

When he was little Noan licked that spot
